

What is an e-lock?

E-lock

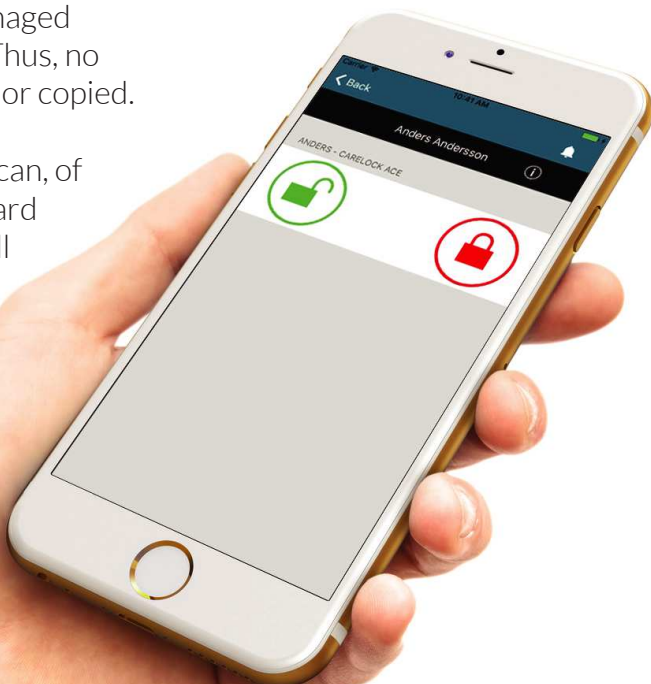

An e-lock is a keyless locking system that is mounted on your front door, which the home care service or other municipal employees can use to unlock your door using an app on a municipal service phone.

The downloaded key on the service phone will be available/valid for a specified period of time. The locks are managed using a mobile phone. Thus, no keys can be lost, stolen or copied.

You and your relatives can, of course, use your standard door key. The e-lock will not be visible from the outside as it is mounted on the inside of the door.

If you are not able to unlock your door to allow service personnel to enter, by installing an e-lock you will always be sure to get help.

Visits by the home care service will be quality assured by registering and storing all visits electronically.

	DISCRETE INSTALLATION ← INSIDE OUTSIDE →	
		
NO NEED FOR A PHYSICAL KEY FOR HOME CARE SERVICE	SAFER FOR USERS	
STANDARD DOOR KEYS CAN ALSO BE USED		NO PIN CODES

For more information, you can contact the health and care services in your municipality.
